

# Smart & Bright

## Lupine ~ Tesla TL 1200

Once in a while a company making products for one market strikes Gold in another. Lupine Lighting has been making top class bike lights for a while and the Tesla TL1200 Flashlight, simply adds a rechargeable battery in an integrated grip to their Tesla head. The result is a modular and versatile flashlight that takes advantage of the brilliant 'Charger One' features combined with Lupine's First Class PCB, combo-programing and ON/OFF switch. This ends up being the ultimate technology geek's flashlight of choice. It reeks high usability quotient and is priced just right for the build quality and feature set it offers. Oh! ... and it dances from hellish bright to a low output that runs for much longer on a single charge. SOS & Flashing are standard settings. The holster allows for a fast draw and quick reholster. Not much else to want in a light that's ideal for journeymen, bikers, outdoorspersons and cops!

**Lupine | TL1200 | \$595.00 | [www.GretnaBikes.com](http://www.GretnaBikes.com)**

**Dimensions:** 50mm/40mm dia. > 145mm L
